WORK EXPERIENCE

Backend Engineer - CreateOS

April 2026 - Present

- Built AI execution infrastructure across Go services and Kubernetes for a platform serving **5 enterprise B2B customers**; reduced model time-to-first-token by **60%**.
- Implemented multi-provider and gateway-backed model execution with **Vercel AI SDK** and **Vercel Eve**, supporting **500+ connectors** through Composio and a custom MCP plugin architecture.
- Shipped tenant-isolated platform primitives for secure production workflows: short-lived credential resolution, vault-backed secrets, agent memory, Knowledge Base APIs, and three object-storage providers.

Associate Software Engineer - CoinDCX

November 2024 - March 2026

- Owned CoinDCX's **Crypto Trade Report** product end to end, delivering tax-ready trade summaries with **P99 generation under 30 seconds** across **100,000 requests** in its first week and **15,000–20,000 daily** at peak.
- Designed **asynchronous report generation** and **optimized bulk trade retrieval queries** against a read replica to protect production portfolio workloads during tax season.
- Built pricing enrichment, report assembly, and automated email delivery, reducing report-related tax-season support tickets from **500+ to fewer than 5**.

Software Developer Intern - Push Protocol

November 2023 - July 2024

- Shipped **Wallet Tracker** notifications for **5,000+ users**, enabling real-time crypto alerts and increasing platform engagement by **30%**.
- Built notification channels for **Lens Protocol**, **1inch**, and **Cow Protocol**, improving cross-protocol delivery speed by **40%**.

TECHNICAL PROJECTS

Kairo (TypeScript, React, Rust, Tauri, Fastify, PostgreSQL)

- Built a screen-native macOS AI tutor, now used by **100+ users**, that combines voice and screen context to provide visual, on-screen guidance during software learning.
- Owned the native-to-backend architecture: a Tauri desktop client, Fastify/PostgreSQL services, and server-side provider-key handling; selected for the **Sarvam Startup Program**.

Era (Go, Docker, SQLite, OpenRouter, Telegram Bot API, GitHub Apps)

- Built a **Go-based ephemeral runtime agent** that turns Telegram tasks into isolated Docker coding runs and has opened **500+ reviewable GitHub pull requests**.
- Designed the safety and reliability layer: budget controls, approval flows, retries, egress allowlists, diff scanning, and SQLite-backed task lifecycle management.

PROGRAMMING ACHIEVEMENTS

- Winner, ETHIndia 2024:** Built **Retrace**, a reversible Ethereum transaction project; awarded **\$5,600**.
- Winner, Smart India Hackathon 2022:** Won against **700,000+ participants**.
- Recipient, Solana X CoinDCX Grant:** Built **SendX** for sending crypto to X creators using Privy pre-generated wallets.

SKILLS

Languages	Go, Python, TypeScript, JavaScript, Rust, Solidity, C++, Java
Backend/Data	Gin, Node.js, Fastify, Express.js, PostgreSQL, MongoDB, Redis, REST, WebSockets
AI/GenAI	LLM Applications, AI Agents, RAG, LangChain, OpenAI APIs, OpenRouter
Infra	Docker, Kubernetes, AWS, Linux, Git, Distributed Systems, System Design
Web3	Ethereum, Solana, Smart Contracts, Foundry, Hardhat, Privy

EDUCATION

Indian Institute of Information Technology (IIIT), Sri City

November 2021 - May 2025

Bachelor of Technology in Computer Science and Engineering
